

CMPE 483 Sp. Top. in CMPE Blockchain Programming
Fall 2019

Homework 2 (due January 3rd)

(The project can be done in groups of at most three students)

Build a web based user interface for the Lottery Project you have developed in Homework 1. You should have a complete project that runs on the Ropsten Test Network. Anyone having a metamask account should be able to use the web browser interface to interact with your Lottery smart contract.

Note: You should perform a demonstration of your project to me. A doodle survey will be sent in order to schedule demo dates and times for each group.
